Lucas Scheinkerman

Buenos Aires, Argentina

Professional Summary

I'm an AI & Robotics Engineer based in Argentina, specializing in computer vision, robotics, and LLM-powered systems.

Experienced in designing production AI solutions using C++, Python, PyTorch, Docker, TensorRT, Transformers, and NVIDIA Jetson platforms, with expertise spanning embedded AI, simulation, and edge deployment.

Curious by nature and driven by challenging engineering problems, I enjoy transforming research ideas into robust, real-world systems.

Professional Experience

Founding Engineer | IAMAI Simulations | 2026.06 – Present

- Lead implementation of core features across an AI-powered drone simulation platform.
- Maintain open-source repositories, review community contributions, and provide technical support through GitHub and Discord.
- Mentor junior engineers and contribute to technical planning, architecture, and product direction.
- Integrate AI models and AI-driven workflows for autonomous behaviors, perception, and developer tooling.
- Designed and maintain the CI/CD pipeline, reducing deployment friction and review overhead.
- Deliver technical demonstrations for prospective customers.

AI & Robotics Engineer | Marvik | 2026.01 – 2026.06

- Designed and implemented an embedded AI assistant for industrial heavy machinery (loaders, excavators, aerial lifts).
- Fine-tuned language models for domain-specific applications.
- Integrated Automatic Speech Recognition (ASR), Retrieval-Augmented Generation (RAG), and Text-to-Speech (TTS) into a production-ready embedded system.

Computer Vision Engineer | Optriment | 2025.01 – 2026.01

- Developed high-performance computer vision pipelines using PyTorch, TensorRT, OpenCV, CUDA, Python, and C++.
- Deployed AI services on Jetson Nano devices using Docker Compose and Google Cloud Platform (GCP).
- Built monitoring and analytics dashboards using Grafana and Prometheus.
- Developed Python-based microservices, including Telegram bot integrations.

Team Lead | Freelance project | 2025.08 – 2025.11

- Lead the development of a computer vision mobile app for analying golf-swing metrics.
- Tech stack: Python, Docker, PyTorch, ViT and YOLO models.
- Fine-tuned DETR and ViT models for specific project needs.

Robotics Simulation Engineer | IAMAI Simulations | 2023.06 – 2025.01

- Maintenance and feature-implementation in OSS Project AirSim.
- Development of simulation tools to generate artificial datasets for training AI-based aircraft navigation algorithms.
- Implementation of physics and core modules & libraries using C++, Python and Unreal Engine.

Infrastructure Engineer | Ekumen | 2019.09 – 2022.05

- Designed and implemented data collection and ingestion pipelines,
- Optimized data processing workflows.
- Developed Android applications focused on sensor data collection, and augmented reality features.
- Mentored new hires in introductory-level C++ training, enhancing their foundational programming skills.
- Conducted technical interviews, assessing candidate qualifications and technical expertise.

Skills

Technical: C++, Python, Docker, GCP, Grafana, Prometheus, PyTorch, CUDA, Numpy, OpenCV, Pandas, Transformers, Hugging Face
Professional: Leadership, Communication, Strategic Planning
Languages: English, Spanish, Hebrew.

Education

Electronics Engineering (MSc. Equivalent)	University of Buenos Aires	2025
